

Vertical Jump Test

This test is a measure of jumping or explosive power, and is recommended as a part of the public safety fitness assessment battery. It is an important area for pursuit tasks that require jumping and vaulting.

Equipment

yardstick taped to a smooth wall, chalk dust or chalk for marking extension when jumping

Procedures

1. Client stands with one side toward the wall and reaches up as high as possible to mark his/her standard reach on the yardstick.
2. Client jumps as high as possible and marks the spot on the wall above his/her standard reach mark. Prior to jump, one foot must remain stationary on the floor.
3. Score is the difference between the standard reach and top of the jump mark, to the nearest 1/2 inch.
4. The best of three trials is the score.

PROTOCOL FOR ANAEROBIC POWER TESTING

300 Meter Run Test

Purpose

Measure of anaerobic power. This test is recommended as part of the public safety fitness assessment battery.

Equipment

400 meter running track, or any measured 300 meter flat surface that provides good traction, running shoes. Irregular surfaces such as loose gravel are not acceptable.

Procedures

1. As with all physical tests, medical screening should precede testing.
2. As with all physical tests, warm up and stretching should precede testing.
3. If using a 400 meter track, client runs 3/4 of 1 lap (inside lane) at maximal level of effort. Time used to complete distance is recorded in seconds. Consult norms to determine fitness category.
4. Client should walk for 3-5 minutes immediately following test to cool down. This is an important safety consideration.
